SAFETY MANAGEMENT

INTRODUCTION

Effective management of workplace health and safety is important for the health and safety of workers, longevity of organizations & success of business, and protection of the environment. Throughout the world, the effective management of workplace and environmental health and safety issues has become an increasingly important and an expected dimension of responsible business practice.

The discipline of occupational health and safety is rapidly changing to address the increasingly complex workplace needs. Additionally, legislations governing workplace health and safety practices are becoming far more sophisticated & stringent, and have contributed to a growing employer need for health and safety professional expertise.

Employers are now required to identify, evaluate and communicate information about workplace and environment conditions that may have negative effects on workers' health, productivity and the environment. Employers need health and safety practitioners, supervisors, managers, and leaders who are equipped with the knowledge and skills necessary to plan and implement strategies intended to control and manage potential workplace hazards.

COURSE OBJECTIVE

On completion of this course, delegates should be able:

- **Demonstrate good understanding of various elements of safety management system**
- **Implement enhanced safety management system resulting in healthier, safer & more productive work environment.**

COURSE CONTENTS

- **Concepts of Safety Management System**
- **Core Elements of Successful Safety Management System**
- **Safety Culture – Management of Change**
- **Health & Safety Hazards at Workplace**
- **Hazard Identification Risk Assessment & Control Measures**
